

CHAMP's MarketAnalytics delivers next generation market insights

Christopher Shawdon - Head of Business Development

During the pandemic, we talked a lot about data. We discussed numbers of vaccinations, cases, and fatalities - and even compared numbers by country. We became used to seeing charts updated daily and made available on public websites with powerful search options. Data has long been used to make products data-driven, but it could be said that the pandemic made human behavior and governments more data-driven and transparent.

Industries have long published metrics on their performance, but where is air cargo's dashboard showing what we do and how? Most air cargo organizations can measure how they are performing against many different metrics by day, but can you measure your metrics against the market, updated daily?

CHAMP's new service, MarketAnalytics, aims to provide just that level of insight and transparency. The key differences are system integrations to provide greater depth of information, daily rather than monthly updates, and powerful tools like Power BI. Just as music streaming replaced CDs, the approach is transformational and provides dramatically more value for less cost.

 Weight: 100 - 300 kg
 Handling: All
 Goods: All

Market Analytics provides a series of powerful dashboards that show a participant's performance in up to 700 dimensions and can include that of the market.

Users start by selecting the information of interest in the 'slicer' bar. They then select the one or two metrics that they'd like to review from a long list. The detail shows in graphs helping participants to see changes and compare themselves to the market whether by rates, capacity, type of goods, clients, or in other ways.

2 Set the metrics

1st metric (M1): Weight (kg) ↑

- No selection
- Air waybills (AWB)
- Pieces
- Weight (kg)
- Cargo Ton Kilometers (C...)
- Net charge (USD)
- Yield per kg (USD)
- Yield per CTk (USD)
- Net charge per AWB (USD)
- Net charge per piece (US...

2nd metric (M2): Yield per kg (USD)

Actual value

Data is confidential. Individual participants cannot see the data of others, only their own business, the market total, and their market share. Data is processed in accordance with a published Data Use Policy. And the service is operated by CHAMP which is 100% owned by SITA, maybe the only industry-owned tech company.

A highlight that has caught the attention of even the largest carriers and forwarders is the normalization performed by the service. That's the process by which the many versions of a name are grouped into one, making analysis possible by participant and type of goods.

The service also provides new types of analyses by types of goods or handling code which can help identify the needs of shippers and micro product segments.

Example dashboards are shown below / overleaf.

This dashboard covers the last 16 full weeks. The tables shows key shipment metrics ranked by change last week compared to the previous three weeks to show which are going up or down. You can select your top 10 branches, top 50, or all. And in the slicer bar on the left, you can filter by region, partner, origin and/or
